Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 6 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent No. 6,010,247 to Mouri et al.

Mouri et al discloses in Figure 1 a bearing device comprising a pair of outer races, 12b, 13b, each having an outer raceway on an inner peripheral surface thereof; a pair of inner races 12a, 13a, each respectively having an inner raceway on an outer peripheral surface thereof; a plurality of balls 12c, 13c, rotatably provided between the respective outer raceways and inner raceways; a cylindrical sleeve 9a on which the pair of inner races are fixed; wherein opposing axial end surfaces of respective each of said pair of outer races are abutted to one another; and wherein axial end surfaces of respective each of said pair of inner races are positioned facing one another with a gap therebetween, wherein the size of the gap S is adjusted to provide a desired preload to the plurality of balls. The sleeve 9a due to its hollow structure is inherently adapted to be mounted on a shaft. Mouri et al further discloses the use of the assembly of Figure 1 in Figure 14 showing the cylindrical sleeve having axially outer end surfaces and the outer rings having an axially outer end surface at the axially opposite end of the bearing device, respectively, such that the axially outer end surface of the outer rings is provided at substantially the same position as the axially outer end surface of the sleeve. With respect to claim 9, the sleeve 9a is about twice the width of an axial length of the outer rings.

Art Unit: 3682

Applicant's arguments filed June 15, 2005 have been fully considered but they are not persuasive. As noted in the rejection above, the newly added language to claim 1 is found in Mouri, specifically in Figure 14(b).
